| Lube Oil System (refill) 1094 L (289 U.S. gal) |

FEATURES

Engine Design

 Incorporates 20 years of proven component reliability and durability from 3600 engines

Improved Fuel Efficiency

- Electronic Unit Injection (EUI) fuel system provides optimized combustion at any load
- Lower specific fuel consumption at part load
- Reduced transient smoke and emissions

Caterpillar Packaging Concept

- Offshore drilling package provides single lift handling
- Caterpillar warranty for all packaged components
- Includes most ancillaries, ready-to-run package
- Easy to handle and install, few shipped-loose parts

Custom Packaging

For any petroleum application, trust Caterpillar to meet your exact needs with a factory custom package. Cat[®] engines, generators, enclosures, controls, radiators, transmissions — anything your project requires — can be custom designed and matched to create a one-of-a-kind solution. Custom packages are globally supported and are covered by a one-year warranty after startup.

Full Range of Attachments

Large variety of factory-installed engine attachments reduces installation time

Testing

Every engine is full-load tested to ensure proper engine performance.

Product Support Offered Through Global Cat Dealer Network

More than 2,200 dealer outlets

Caterpillar factory-trained dealer technicians service every aspect of your petroleum engine

Caterpillar parts and labor warranty

Preventive maintenance agreements available for repairbefore-failure options

S•O•S^{sм} program matches your oil and coolant samples against Caterpillar set standards to determine:

- Internal engine component condition
- Presence of unwanted fluids
- Presence of combustion by-products
- Site-specific oil change interval

Over 80 Years of Engine Manufacturing Experience

Ownership of these manufacturing processes enables Caterpillar to produce high quality, dependable products.

- Cast engine blocks, heads, cylinder liners, and flywheel housings
- Machine critical components
- Assemble complete engine

C280-8 OFFSHORE GENERATOR SET

2420 ekW 2530 bkW (3393 bhp)

STANDARD EQUIPMENT

Product Consist

The engine is a turbocharged, water aftercooled, four stroke cycle, electronic unit injection engine with a 280 mm (11 in) bore by 300 mm (11.8 in) stroke. SAE standard rotation. Counterclockwise viewed from the rear of engine flywheel.

Air Inlet System

Aftercooler, fresh water, corrosion resistant coated (air side); air inlet shutoff; breather, crankcase, top-mounted; turbocharger, rear-mounted, engine oil lubricated

Control System

Single Cat ADEM A3 electronic engine control module with electronic unit injector fuel system, rigid wiring harness (10 amp 24V power required to drive electronic engine control modules)

Cooling System

Engine coolant water drains

Exhaust System

Dry, gas tight, exhaust manifold

Fuel System

Distillate fuel (requires viscosity ranging from 1.4 cSt to 20 cSt at 38°C), fuel transfer pump (mounted on left-hand side), duplex fuel filters, electronically controlled unit injectors

Lube System

Centrifugal oil filters with single shutoff, service-side engine mounted on cylinder block inspection covers (includes installed oil lines and single shutoff valve), filters centrifuge bypass oil from the main lubricating oil pump (can be serviced with the engine running), oil filler and dipstick, oil pressure regulating valve, crankcase explosion relief valves

Protection System

PLC-based system provides protection, monitoring, and control housed in a NEMA 4 (IP66) enclosure. All critical shutdowns have both relay-based and PLC-based protection. Sensors are factory wired.

Features:

- 254 mm (10.0 in) color monitor to display all engine parameters and alarm annunciation
- Annunciation of all engine shutdowns, alarms and status points
- Start/prelube control switch, fuel control switch and emergency stop button
- Selection of local/remote control of engine
- Selection of idle/rated control of engine
- Equipped for remote communication
- Four 4-20 mA outputs (programmable)
- Relay contact signals to the remote monitoring system (summary shutdown, summary alarm, local operation/ remote, engine running, PLC failure, fuel control and idle/rated)

Contactors: lube oil pressure (high/low speed), jacket water pressure, AC/OC pressure, start air pressure, crankcase pressure

4-20 mA Transducers: lube oil pressure (to filter/to engine), fuel pressure (to filter/to engine), inlet air manifold pressure RTD (PT 100): lubricating oil to engine temperature, inlet air manifold temperature, fuel to engine temperature, AC/OC inlet temperature, jacket water outlet temperature (alarm), jacket water outlet temperature (shutdown), generator rear bearing temperatures (front and rear), generator stator A temperatures (A, B, and C)

Switches: jacket water detector, metal particle detector,

starting oil pressure or detector

Thermocouples: exhaust thermocouples (one per cylinder plus inlet to turbine and stack)

Alarm Pressures: low oil pressure, high oil filter differential, low fuel pressure, high fuel filter differential, high inlet air manifold pressure, low starting air pressure, low jacket water pressure, low AC/OC water pressure, low raw/sea water pressure (customer supplied contact)

Alarm Temperatures: high lube oil temperature, high inlet air manifold temperature, high fuel temperature, high AC/
OC inlet temperature, high jacket water outlet temperature, high generator bearing temperatures (front and rear), high generator front bearing temperature (genset only), high generator stator temperatures (A, B, and C), high individual exhaust port temperature, high turbine inlet temperature, high exhaust port deviation temperature

Other Alarms: low battery voltage, low oil level, jacket water detection, low coolant level (switch supplied with an expansion tank or customer supplied if an expansion tank is not selected), metal particle detection

Shutdown Pressures: low oil pressure, high crankcase pressure

Shutdown Temperatures: high jacket water temperature, high lube oil temperature, high generator bearing temperature

Other Shutdowns: metal particle detector, engine overspeed, customer shutdown (normally open contact customer supplied)

Programmable Inputs: The customer can wire display and alarm on two customer supplied RTDs, and two customer supplied 4-20mA (0-10 VDC) sensors, three discrete alarms, and three discrete shutdowns.

Gauges: In addition to the 10-inch color monitor that displays all engine parameters, there are also three engine-mounted gauges and three control panel gauges. The three engine-mounted gauges are fuel pressure, lube oil pressure, and inlet air restriction. The three control panel gauges are an engine hour meter, digital tachometer, and a starting air pressure gauge.

Lights: Four lights are included on the control panel for displaying prelube status, summary alarm, summary shutdown, and PLC failure.

General

Paint, Cat yellow

Pumps, gear-driven: fuel, oil, jacket water, aftercooler/oil cooler water, SAE standard rotation — CCW

Literature

Two complete sets of service literature listed below: serial number-specific custom parts book CD, service manual (Operation & Maintenance, Specifications, Systems Operation, Testing and Adjusting, Disassembly and Assembly manual), and technical manual (parts/service information for special equipment)

LEHW0092-03 Page 2 of 6

C280-8 OFFSHORE GENERATOR SET

2420 ekW 2530 bkW (3393 bhp)

OPTIONAL ATTACHMENTS

Emission Certification

GL and CCS approved IMO certificate — includes statement of compliance or Engine International Air Pollution Prevention (EIAPP) certificate, supplied by the Recognized Organization (RO) where available and technical file to be kept on board per IMO regulations.

Marine Society Requirements

Spray shielding to meet SOLAS regulations for flammable fluids

European Certifications

Declaration of Incorporation for EU Machinery Safety Directive and EU Low Voltage Safety Directive

General

Base assembly

Vertically-restrained vibration isolators and weld plates Torsional couplings

Mounting groups for engine, generator, and base Accessory module to mount attachments such as the expansion tank, heat exchanger, instrument panel and engine controls, annunciator panel, alarm and shutdown contactors, fuel strainer

Flywheel

Flywheel and damper guards

Engine barring device

1:1 manual barring device

50:1 manual barring device

Electric barring device

One-year storage preservation

Oceanic transportation shipping protection (shrink wrap and tarp)

Engine testing — certified dynamometer test, fuel consumption test, rated speed performance test, overload test, minimum power setting, peak firing pressure test, turbo work cert and crankshaft work cert

Standard and project-specific witness testing

Air Inlet System

90° adapter and straight adapters for air inlet to turbocharger Air cleaners

Air cleaners with Cat dry paper filter elements (approximately 99.9% efficient at filtering SAE fine dust)

Soot filter

Control System

4-20 mA load feedback signal Load sharing module Direct rack module

Cooling System

Separate Circuit Aftercooler (SCAC)

Customer water connections

Jacket water thermostats

AC/OC thermostats

Accessory module-mounted high volume expansion tank

Jacket water heaters

Heat recovery connections and thermostats for use with water maker system

ANSI cooling system flanged connections

Exhaust System

Exhaust manifold shields

Vertical or 30° outboard exhaust orientation options Exhaust outlet expanders and weld flanges

Fuel System

Manual fuel priming pump Duplex primary fuel strainer Flexible fuel hose connections

Lube System

Dry engine-mounted sump system that gravity feeds into base assembly integral sump

Engine-mounted duplex oil filter

Intermittent air prelube

Continuous electric prelube

Redundant prelube with continuous electric prelube and intermittent air prelube backup

Oil pan drain valves

Electric continuous prelube pump

Lube oil heater

Protection System

Wiring meets MCS requirements

Upgrade PLC monitor to industrial PC

Upgrades AC/OC, JW and start air pressure from contactors

to transducers

Raw water/sea water pressure transducer

Modbus communication

Beacon and horn

Single engine remote display monitor

Emergency pump start signal

Cabinet cooler

Generator power monitoring

Remote relay panel

Turbocharger speed sensors

Cylinder pressure relief valve

Oil mist detector

Starting System

Single turbine air starters

Boost control valve for extremely cold ambient conditions

Air start pressure reducing valves

Optional Literature

Project-specific installation drawings Electrical schematics and P&IDs

Spare Parts Kits

CONDITIONS AND DEFINITIONS

ENGINE RATING OBTAINED AND PRESENTED IN ACCORDANCE WITH ISO 3046/1 AND SAE J1995 JAN90 STANDARD REFERENCE CONDITIONS OF 25°C, 100 KPA, 30% RELATIVE HUMIDITY AND 150M ALTITUDE AT THE STATED AFTERCOOLER WATER TEMPERATURE. CONSULT ALTITUDE CURVES FOR APPLICATIONS ABOVE MAXIMUM RATED ALTITUDE AND/OR TEMPERATURE. PERFORMANCE AND FUEL CONSUMPTION ARE BASED ON 35 API, 16°C FUEL HAVING A LOWER HEATING VALUE OF 42.780 KJ/KG USED AT 29°C WITH A DENSITY OF 838.9 G/LITER.

NOTES

- 1) FUEL CONSUMPTION TOLERANCE. ISO 3046/1 IS 0, + 5% OF FULL LOAD DATA. NOMINAL IS ± 3 % OF FULL LOAD DATA.
- 2) ENGINE POWER TOLERANCE IS ± 3 % OF FULL LOAD DATA.
- 3) HEAT REJECTION TO JACKET AND EXHAUST TOLERANCE IS ± 10% OF FULL LOAD DATA. (heat rate based on treated water)
- 4) HEAT REJECTION TO ATMOSPHERE TOLERANCE IS ±50% OF FULL LOAD DATA. (heat rate based on treated water)
- 5) HEAT REJECTION TO LUBE OIL TOLERANCE IS ± 20% OF FULL LOAD DATA. (heat rate based on treated water)
 6) HEAT REJECTION TO AFTERCOOLER TOLERANCE IS ± 5% OF FULL LOAD DATA. (heat rate based on treated water)
- 7) TOTAL AFTERCOOLER HEAT = AFTERCOOLER HEAT x ACHRF (heat rate based on treated water)

8) FUEL CONSUMPTION DATA IS WITHOUT SEA WATER PUMP.

TOTAL DERATION FACTORS:

This table shows the deration required for various air inlet temperatures and altitudes. Use this information to help determine actual engine power for your site. The total deration factor includes deration due to altitude and ambient temperature, and air inlet manifold temperature deration.

AFTERCOOLER HEAT REJECTION FACTORS:

Aftercooler heat rejection is given for standard conditions of 25°C and 150 m altitude. To maintain a constant air inlet manifold temperature, as the air to turbo temperature goes up, so must the heat rejection. As altitude increases, the turbocharger must work harder to overcome the lower atmospheric pressure. This increases the amount of heat that must be removed from the inlet air by the aftercooler. Use the aftercooler heat rejection factor to adjust for ambient and altitude conditions. Multiply this factor by the standard aftercooler heat rejection.

GENERATOR EFFICIENCY:

Generator power determined with an assumed generator effeciency of 96% [generator power = engine power x 0.96]. If the actual generator efficiency is less than 96% [and greater than 94.5%], the generator power [ekW] listed in the technical data can still be achieved. The BSFC values must be increased by a factor.

The factor is a percentage = 96% - actual generator efficiency.

SOUND DATA:

Data determined by methods similar to ISO Standard DIS-8528-10. Accuracy Grade 3.

DIMENSIONS

| Dimensions and Weight | | | | | | | |
|-----------------------|-----------|------------|--|--|--|--|--|
| Length | 8139.5 mm | 320.45 in | | | | | |
| Width | 2325.9 mm | 91.57 in | | | | | |
| Height | 3405.8 mm | 134.08 in | | | | | |
| Weight – dry | 49 000 kg | 108,027 lb | | | | | |

Note: Dimensions are dependent on generator and options selected. See general installation drawings for detail.

Note: Weight includes engine, generator, base, coupling, water/lube oil heater, generator lubrication module, and piping. Weight may vary depending upon individual configuration.

RATING DEFINITIONS AND CONDITIONS

Rating Definition — Maximum Continuous Rating (MCR) following reference conditions according to the International Association of Classification Societies (IACS) for main and auxiliary engines. An overload of 10% is permitted for one hour within 12 hours of operation.

Conditions are based on SAE J1995 standard conditions of 100 kPa (29.61 in Hg) and 25°C (77°F). These ratings also apply at ISO3046/1, DIN6271, and BS5514 standard conditions of 100 kPa (29.61 in Hg),

27°C (81°F), and 60% relative humidity. Ratings are valid for air cleaner inlet temperatures up to and including 60°C (140°F).

Fuel Consumption — 5% tolerance and based on fuel oil of 35° API [16°C (60°F)] gravity having an LHV of 62 780 kJ/kg (18,390 Btu/lb) when used at 29°C (85°F) and weighing 838.9 g/liter (7.001 lbs/U.S. gal). Fuel consumption is shown with all engine-driven oil, fuel, and water pumps.
